

SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR PRICE AUDITING IN A SUPPLY CHAIN MANAGEMENT FRAMEWORK

ABSTRACT

5

A system, method and computer program product are disclosed for price auditing in a supply chain management framework. A network is utilized to collect data from a plurality of stores of a supply chain that relates to the sale of goods by the stores.

Electronic order forms are generated based on the data for ordering goods from a
10 plurality of distributors of the supply chain and then sent to the distributors utilizing the network. In response, invoices are received from the distributors utilizing the network. A price for the goods is then calculated utilizing the electronic order forms and the invoices. Subsequently, the price is audited.
